

What is claimed is:

1. An imaging apparatus comprising;
a storage media to store an information file in which information data are described;
5 a connector to attach and detach said storage media;
first display means for displaying said information file;
first selection means for selecting the information file which is displayed by said first display means;
second display means for displaying the information data which
10 are described in the information file selected by said first selection means;
second selection means for selecting the information data which are displayed by said second display means; and
means for adding the information data, which are selected by
15 said second selection means, into an image file.
2. An imaging apparatus comprising;
a storage media in which an information file is stored;
a connector to attach and detach said storage media; and
20 a function for displaying said information file,
an attribute of said information file being defined,
said function for displaying said information file including a function for switching a display name to display switching as to which of an information file name or a display name corresponding to the
25 attribute of the information file is displayed,
said display name switching function including at least one of a manual switching of display screen or an automatic switching of

display screen by the attribute of the information file.

3. An imaging apparatus comprising:

a storage media to store an information file in which
5 information data are described, an attribute of said information file
being defined;

a connector to attach and detach said storage media;

first display means for displaying said information file;

first selection means for selecting the information file which is
10 displayed by said first display means;

second display means for displaying information data which are
described in the information file selected by said first selection means;

second selection means for selecting information data which are
displayed by said second display means;

15 an information data changing means for changing the
information data, which are selected by said second selection means in
accordance with the attribute of the information file selected by the
first selection means; and

means for adding the information data, which are changed by
20 said information data changing means, into an image file.

4. An imaging apparatus comprising;

a storage media to store an information file in which first
25 information data are described, an attribute of said information file
being defined,

a connector to attach and detach said storage media;

second information data, which are previously described in the imaging apparatus;

displaying means for displaying said information file;

selection means for selecting the information file which is
5 displayed by said display means; and

information data replacement means for replacing the first information data, which are described in the information file selected by said selection means, with the second information data, in accordance with the attribute of the information file selected by said selection
10 means.

5. An imaging apparatus comprising;

a storage media to store an information file in which information data are described;

15 a connector to attach and detach said storage media;

first display means for displaying said information file;

first selection means for selecting the information file displayed
by said first display means;

second display means for displaying the information data which
20 are described in the information file selected by said first selection means;

second selection means for selecting the information data which are displayed by said second display means;

means for adding the information data, which are selected by
25 said second selection means, into an image file; and

confirmation means for confirming the information data which are selected by said second selection means.

6. An imaging apparatus comprising;
a storage media to store an information file in which information
data are described;

5 a connector to attach and detach said storage media;
a first display device to display said information file;
a first selection device to select the information file which is
displayed by said first display device;
a second display device to display the information data which are
10 described in the information file selected by said first selection device;
a second selection device to select the information data which are
displayed by said second display device; and
a device to add the information data, which are selected by said
second selection device, into an image file.

15

7. An imaging apparatus comprising;
a storage media to store an information file in which information
data are described, an attribute of said information file being defined;
a connector to attach and detach said storage media;
20 a first display device to display said information file;
a first selection device to select the information file which is
displayed by said first display device;
a second display device to display the information data which are
described in the information file selected by said first selection device;
25 a second selection device to select the information data which are
displayed by said second display device;
an information changing device to change the information data,

which are selected by said second selection device in accordance with the attribute of the information file selected by the first selection device; and
a device to add the information data, which are changed by said information changing device, into an image file.

5

8. An imaging apparatus comprising;
a storage media to store an information file in which first information data are described, an attribute of said information file being defined,

10 a connector to attach and detach said storage media;
second information data, which are previously described in the imaging apparatus;

a display device to display said information file;
a selection device to select the information file, which is
15 displayed by said display device; and

an information data replacement device to replace the first information data, which are described in the information file selected by said selection device, with the second information data in accordance with the attribute of the information file selected by said selection
20 device;

9. An imaging apparatus comprising;
a storage media to store an information file in which information data are described;

25 a connector to attach and detach said storage media;
a first display device to display said information file;
a first selection device to select the information file displayed by

said first display device;

a second display device to display the information data, which are described in the information file selected by said first selection device;

a second selection device to select the information data, which are
5 displayed by said second display device;

a device to add the information data, which are selected by said second selection device, into an image file; and

a confirmation device to confirm the information data, which are selected by said second selection device.

10
